

Amendment to the claims:

This listing of claims will replace all prior versions, and listings, of claims:

Listing of Claims:

1. (previously presented) A display device including:
 - a first member including a tabletop provided with a transparent portion;
 - a second member arranged to cooperate with the first member to define an interior space for holding an article to be viewed through the transparent portion;
 - the first and second members are arranged to be selectively engaged together or disengaged by way of lockable operating means, the operating means being operable from a position outside the interior space.
2. (previously presented) A display device according to claim 1 wherein the first and second members engage together by way of two opposed retaining means.
3. (previously presented) A display device according to claim 2 wherein each retaining means includes a flange and a mating aperture and at least one of the flanges is movable between an engaged and a disengaged position.
4. (previously presented) A display device according to claim 3 wherein each flange is disposed on the second member and each recess is disposed on the first member.
5. (previously presented) A display device according to claim 4 wherein the flanges face outwardly from one another.
6. (previously presented) A display device according to claim 1 wherein the operating means includes a rotary lock barrel which is arranged to rotate a cam.
7. (previously presented) A display device according to claim 6 wherein rotation of the cam causes lateral movement of a locking bar upon which one of the flanges is disposed.
8. (previously presented) A display device according to claim 3 wherein each flange is engageable with either recess.
9. (previously presented) A display arrangement including:
 - a tabletop having an interior space for holding an article;
 - the table top includes a transparent portion allowing viewing of the article;
 - the article including an information bearing sheet and a three dimensional object;

the information bearing sheet includes a cut-out portion through which the object may be viewed.

10. (previously presented) A display arrangement according to claim 9 wherein the object is a product and the sheet bears information relating to that product.
11. (previously presented) A display arrangement according to claim 9 wherein the display arrangement includes a supporting means including a flat portion for supporting the sheet, and a depressed portion for supporting the object.
12. (previously presented) A display arrangement according to claim 11 wherein the supporting means is biased towards the transparent portion.
13. (previously presented) A display arrangement according to claim 12 wherein the supporting means is biased by compressible material.
14. (previously presented) A display device according to claim 11 wherein the supporting means is in the form of a removable tray.
15. (currently amended) A display device [according to claim 1]including a table top provided with a transparent portion;
a second member arranged to cooperate with the first member to define an interior space for holding an article to be viewed through the transparent portion; the first and second members are arranged to be selectively engaged together or disengaged by way of lockable operating means, the operating means being operable from a position outside the interior space when used in a display arrangement according to claim 9.
16. (currently amended) A display arrangement [according to claim 9] further comprising a tabletop having an interior space for holding an article;
the table top includes a transparent portion allowing viewing of the article;
the article including an information bearing sheet and a three dimensional object;
the information bearing sheet includes a cut-out portion through which the object may be viewed including a display device according to claim 1.
17. (previously presented) A tabletop for use with a display arrangement, the tabletop having a transparent portion through which an article may be viewed and two opposed recesses that allow engagement of the tabletop to a fixed support.

18. (previously presented) A base portion for a display arrangement, the base portion including a base plate provided with two outwardly facing flanges that allow engagement of an overlying tabletop member, at least one of the flanges being movable to selectively engage or disengage the overlying tabletop member.
